

VisionR Module

Warehouses

This module helps managing storage and deliveries of product items. Available items are located within storage sections and numbered racks. The module keeps track of incoming and outgoing invoices. There are built-in reminders on delivery status.

Description

The VisionR module "Warehouses" is used to manage storage and delivery of product items.

It can be used to manage inventory movements and keeps track of incoming and outgoing item deliveries. Product availability is managed either by article amounts or by status tracking of single items. Article amounts or single items are located within a warehouse in storage sections and numbered racks. There is an extendable hierarchical structure of product articles.

Vendors and customers can have online access to item orders. Incoming and outgoing invoices for item delivery are linked to articles and items. The module also helps managing delivery contracts.

This module can be used to manage multiple storages in different locations.

Functional overview

- management of storage and delivery of product articles and single items
- management of storage and delivery of inventory
- management of multiple storage in different locations
- storage sections and numbered racks
- incoming and outgoing delivery orders
- incoming and outgoing invoices
- item availability and location checks
- online status tracking of deliveries
